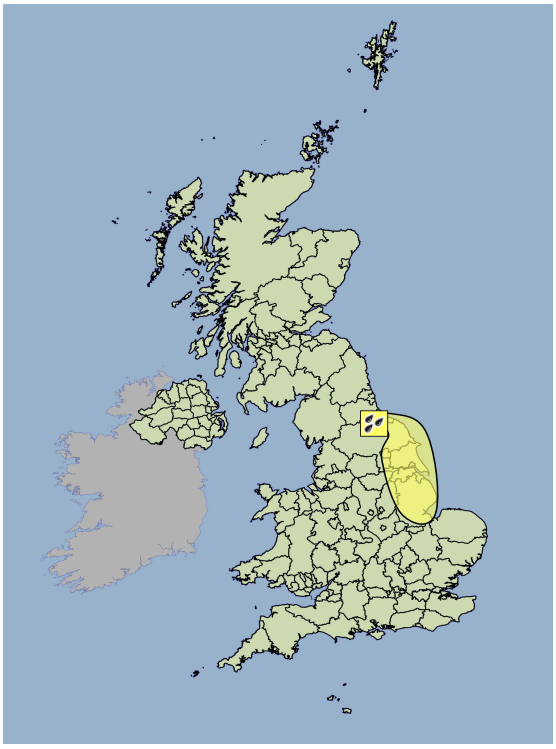
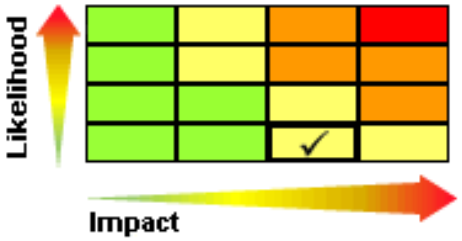
National Severe Weather Warning Service





CANCELLED

Chief Forecasters Assessment
A front will migrate slowly north up the eastern side of England bringing very moist and unstable air, and an area of rain which is likely to become torrential at times, especially near the coast and windward hills. There are doubts both about how far north it will reach, and how widespread the heaviest bursts will be. However, rainfall totals are likely to be in the region of 15 to 25 mm, but near coasts and windward hills, local totals of more than 50 mm are quite possible. Rain will be accompanied by a blustery, northerly wind.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Tue, 31st May 2016** until **09:00 on Wed, 01st Jun 2016**

This warning is now cancelled as the threat of heavy rainfall across the area has diminished.
